# The Briese Diaspora: emigration of Brieses from Prussia to the New World during the 19<sup>th</sup> and early 20<sup>th</sup> centuries

David Briese (Revised December 2021)

Germans have been leaving their homeland to settle in parts of the New World since the 17<sup>th</sup> century, but this became a massive wave of emigration in the 19<sup>th</sup> century when many millions made the life-changing decisions to voyage by ship to a different continent, different language and different culture in the hope of improving their lives. The reasons for this were many; economic hardships due to unemployment, land tenure issues and crop failures, religious and political persecution, the avoidance of military conscription and wars or simply an overpowering sense of adventure. Amongst these were 265 people bearing the surname Briese.

The attached tables show the names of Briese families and individuals who left their homes in Prussia during this period and settled in Australia, Brazil, Canada and the USA. They were compiled from on-line shipping records <sup>1,2</sup> and family trees <sup>3,4</sup> and have two purposes; as a reference for people interested in the genealogy of different Briese lineages and as source data for the Briese Family Y-DNA project, an attempt to discover the genetic relationships between different Briese families and lineages. The list should neither be considered as complete nor without error, as it is based on transcribed rather than original sources. There are also gaps in the details collected and the author would be grateful for any extra input or corrections (see contact details below).

In total, 269 people with the surname Briese emigrated from Prussia between 1851 and 1914. The temporal pattern of this emigration is shown in Fig. 1 and shows that the peak period of movement was during the 1870s and 80s.

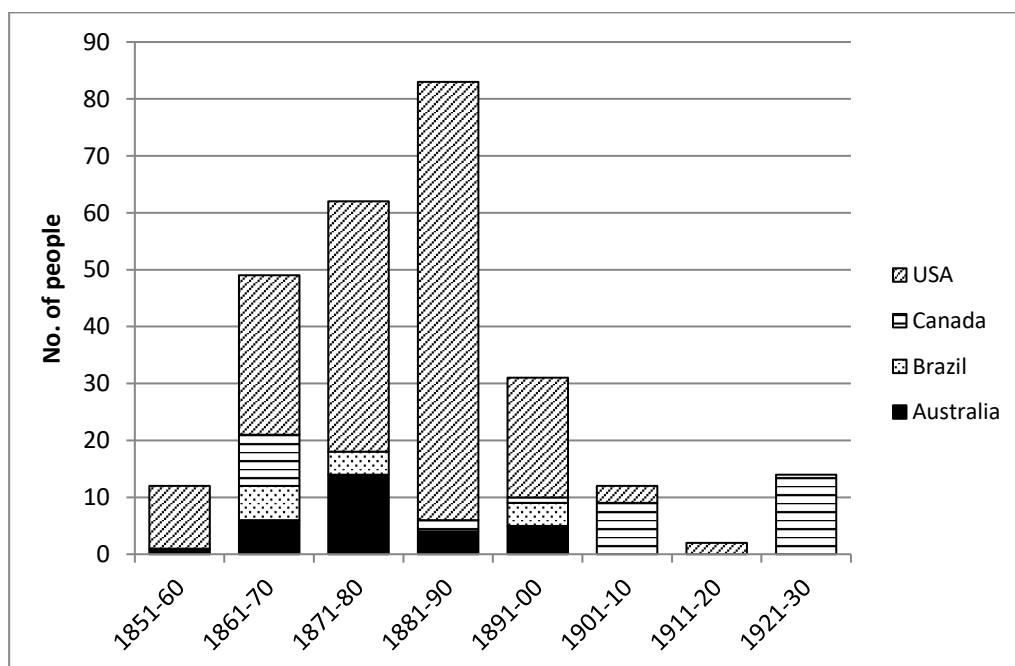

Fig. 1. Emigration of Brieses from Prussia to Australia, Brazil, Canada and the USA in 10-year intervals during the 19<sup>th</sup> and early 20<sup>th</sup> centuries.

The majority of these people crossed the Atlantic Ocean by ship to North America, though some sailed to the southern hemisphere, settling in Australia and South America (see Table 1).

Table 1. Breakdown of Briese families and individuals emigrating to different countries (families include couples, parents with children or sibling groups)

Destination	Total Persons	No. of Families (members)	No. of Single Individuals
USA	190	30 (65 ♂ + 72 ♀)	53 (35 ♂ + 18 ♀)
Canada	35	6 (15 ♂ + 14 ♀)	6 ( 5 ♂ + 1 ♀)
Australia	30	5 (13 ♂ + 12 ♀)	5 ( 3 ♂ + 2 ♀)
Brazil	14	3 ( 4 ♂ + 9 ♀)	1 ( 1 ♂ )

Table 1 suggests that there are 88 potential Briese lineages (44 families and 44 single males) that could provide genetic data for the Briese surname Y-DNA project. In reality there are probably fewer, as individuals of the same family may arrived separately, not all single males would have married, and not all families would have produced male descendants. Of these lineages, the place or region from which they originated in Prussia has been recorded in 68 cases (Table 2).

Table 2. Known Prussian origins of 63 emigrant Briese lineages (family or single male that potentially can carry on the surname).

Provinz (Province)	Kreis (District)	No. of lineages	Total for Province
Westpreussen	Deutsch Krone	24	
Westpreussen	??	1	25
Brandenburg	Berlin	4	
Brandenburg	Lebus	1	5
Hannover	Ostfriesland	1	
Hannover	Harburg	1	2
Pommern	??	2	
Pommern	Neustettin	1	
Pommern	Regenwalde	1	4
Posen	Kolmar	8	
Posen	Schrimm	3	
Posen	Birnbaum	1	
Posen	Witkowo	2	
Posen	Wirsitz	2	16
Greater Poland	Konin	2	
Greater Poland	Lodz	2	4
Volhynia	Novograd Volhynsky	2	
Volhynia	Rozyszcze	2	4
Ostpreussen	Darkehmen	1	
Ostpreussen	Gerdauen	1	2
Schlesien	??	1	1

The names of descendants of these lineages have been published on sites such as Ancestry, MyHeritage and Family Search for 47 lineages and, in some cases, the names of ancestors and the regions where these ancestors lived has also been determined from paper records. In addition, 13 of these families have either been DNA tested or linked to DNA-tested families by paper records. These genetic studies show the relationships between different Briese lineages and how these are influenced by geographic origins.

Over half of these come from two regions, Westpreussen and Posen (Table 2). DNA comparisons made between tested Briese lineages from these areas showed them to share a common ancestor <sup>5,6</sup>. In fact, migration patterns based on early paper records indicate that the Posen Briese lineages originated from the Deutsch Krone Briese population <sup>7</sup>. One family from Greater Poland and two from Volhynia have also been linked by DNA and paper records to this population. Clearly, prior to the period of emigration to the New World, there was a substantial internal movement of Brieses within Germany and neighbouring countries <sup>x</sup>.

The Briese surname originated in what were the eastern provinces of Prussia <sup>7</sup>, as shown in Table 2. As well as the emigrant families, many more Briese lineages remain in modern-day Germany, but they too have largely dispersed from the land of their origins following the post-war expulsion of German-speaking people from former German territories in the east. The Briese family DNA study is equally valid in discovering the links between Briese lineages in Germany as it is for those that have spread to other parts of the world.

If participants from the different lineages can be found, the pattern of relationships between members of the Briese diaspora can be unravelled.

Pommern	Stettin	Lubow	1
Pommern		Klein Werkow	1
Posen	Birnbaum	Hasenholz/Lebus	1
Posen	Kolmar	Josephowo	4
Posen	Kolmar	Laskowo	2
Posen	Witkowo	Mogilno, Potzrymowo	2
Posen	Schrimm	Waldau	2
Posen	Wirszitz	Wirszitz	4
Westpreussen	Deutsch Krone	Appelwerder	2
Westpreussen	Deutsch Krone	Klausdorf	7
Westpreussen	Deutsch Krone	Klein Nakel	4
Westpreussen	Deutsch Krone	Neugolz	2
Westpreussen	Deutsch Krone	Luben	2
Westpreussen	Deutsch Krone	Jastrow	2
Westpreussen	Deutsch Krone	Hohenstein	1
Westpreussen	Deutsch Krone	Lebehneke	1

## Appendix: Lists of Brieses leaving Prussia for Australia, North America and South America in the 19<sup>th</sup> and early 20<sup>th</sup> Centuries

Blue shading indicates families that have a common ancestor (determined by Y-DNA testing), green shading indicates families that are probably also related to these (based on the regions from where they emigrated or where their ancestor lived) and pink shading indicates lineages whose surname ancestry cannot be traced by DNA (either individuals are female, there are no living male descendants or living males are descendants of an unmarried Briese female).

IDs followed by a letter indicate that the individuals have the same Briese parent, but emigrated separately.
